

Mathematisches Kolloquium

Am Freitag, dem 11. Dezember 2015 spricht um 14 Uhr c. t. im Hörsaal IV
der Fachrichtung Mathematik (Gebäude E24)

Prof. Dr. Thierry Lévy
Université Pierre et Marie Curie, Paris

über das Thema:

Squares of determinants and probability

Abstract: A point process is a random finite subset of a set. The set of times at which an atom disintegrates in a sample of radioactive material, the set of places on Earth where someone stands at a certain moment, the set of locations of the trunks of the trees in a forest, are real-life examples of point processes. Among many others, the class of determinantal point processes has received an ever increasing attention over the last 15 years. One of the main qualitative features of these processes is that their points tend to repulse each other, as for example the trees in a forest. In this talk, I will explain what (the simplest kind of) determinantal point processes are, and give a number of examples of mathematical situations in which they arise. The talk will start with elementary considerations of Euclidean geometry and a discussion of the Cauchy-Binet formula. Then, we will see determinantal point processes appear in relation with functions, matrices, graphs, and even possibly with one of the millenium problems. This talk should be accessible to graduate students.

Der Gast wird von Prof. Dr. Roland Speicher betreut.

Alle Interessenten sind zum Vortrag herzlich eingeladen.

Kaffee und Tee ab 13.45 Uhr im Konferenzraum der Mathematik (Erdgeschoss, Raum 103)
