

Mathematisches Kolloquium

Am **Mittwoch, dem 30. Mai 2018** spricht um 14 Uhr c. t. im Hörsaal IV
der Fachrichtung Mathematik (Gebäude E2 4)

Prof. Dr. David Eisenbud
University of California, Berkeley
Director, Mathematical Sciences Research Institute

über das Thema:

Residual Intersections

Abstract: Three important developments in the nineteenth century algebraic geometry brought the theory of residual intersections into prominence: Chasles' theorem that there are 3264 conics tangent to five plane conics; the work of Brill and Noether on the Riemann-Roch theorem for curves in the plane; and Halphen's study of algebraic curves in 3-space. In the twentieth century the theory became more algebraic, with work of Peskine-Szpiro, Artin-Nagata, Huneke-Ulrich and many others. I'll describe some of this history and a recent development from my collaboration with Bernd Ulrich.

Der Gast wird von Prof. Dr. Frank-Olaf Schreyer betreut.

Alle Interessenten sind zum Vortrag herzlich eingeladen.

Kaffee und Tee ab 13.45 Uhr im Konferenzraum der Mathematik (Erdgeschoss, Raum 103)

Die Dozenten der Mathematik
