

Warum betreiben wir freie Wahrscheinlichkeitstheorie? ———— Weil sie cool ist!

"A large part of mathematics which becomes useful developed with absolutely no desire to be useful, and in a situation where nobody could possibly know in what area it would become useful; and there were no general indications that it ever would be so."

John von Neumann (1903-1957)

$$\phi(a^n) = \sum_{\pi \in \mathcal{NC}(n)} \prod_j k_j^{N_j(\pi)}$$
